The inhibitory effect of imipramine on human monocyte-derived IL-1 beta. The aim of the present study was to investigate the effect of imipramine on IL-1 beta expression and release by human monocytes. The results obtained demonstrated a dose-dependent inhibition of IL-1 beta mRNA expression (both in pre- and post-transcriptional levels) and a reduction of the release of mature IL-1 beta by human monocytes after the addition of imipramine at therapeutical doses. However, there was no effect on IL-1 beta release by endogenous monocytes from patients suffering from major depression. The data obtained confirm our hypothesis that the anti-inflammatory activity of imipramine is possibly based on its ability to inhibit the IL-1 beta expression and the release by monocytes/macrophages, although the final result depends on the cellular site and physiological context involved in this inhibitory effect. Moreover, the present findings suggest that the anti-inflammatory effect of imipramine cannot be ascribed to its influence on the major depressive disorder itself. Choledochopancreatic tract and sphincter of Oddi manometry in children with recurrent abdominal pain. Abdominal pain syndromes are common in children, but cause of pain and underlying etiology are often difficult to diagnose. We evaluated the sensitivity of choledochopancreatic tract and sphincter of Oddi manometry in predicting sphincter of Oddi dysfunction in children with recurrent abdominal pain. Forty children with recurrent abdominal pain were evaluated by biliary enzyme tests, radiologic tests, ultrasonography, intubation with esophageal pH monitoring, and manometry (5-lumen transduodenal polytetrafluoroethylene tubing with submucosal electrodes). Sphincter of Oddi manometry was performed by irrigating with 5 cc of water at low rate and measuring the phasic contractions in the choledochopancreatic tract and duodenum. Sphincter of Oddi dysfunction was defined as abnormal sphincter of Oddi manometry with or without abnormal biliary enzyme test. A total of 16 patients were diagnosed as having sphincter of Oddi dysfunction and 24 had normal sphincter of Oddi manometry. Choledochopancreatic tract and sphincter of Oddi contractions were significantly more common in children with sphincter of Oddi dysfunction. Sphincter of Oddi dysfunction was identified 6d1f23a050
